

Notion Template: AI Prompt Library for E-Commerce

Copy this structure into Notion to organize your prompts, track what works, and build your custom library over time.

How to Use This Template

1. Create a new Notion page called "AI Prompt Library"
2. Recreate the database structure below
3. Copy in the prompts you use most from the toolkit
4. Track results and iterate

Database: Prompt Library

Create a Notion database with these properties:

Property	Type	Options
Prompt Name	Title	—
Category	Select	Product Descriptions, Email Marketing, Social Media, SEO, Customer Service, Photography, Competitive Analysis, Ad Copy
Prompt Text	Text (long)	—
Variables Used	Multi-select	{product_name}, {target_audience}, {brand_voice}, {price}, {features}, etc.
My Custom Variables	Text (long)	Your filled-in values for quick reuse
Best Output	Text (long)	Save the best output each prompt has generated
Times Used	Number	—
Performance Rating	Select	★ Not tested, ★★ Okay, ★★★ Good, ★★★★ Great, ★★★★★ Money printer
Last Used	Date	—
Notes	Text	What you changed, what worked, what didn't
Status	Select	Active, Needs Tweaking, Retired

Suggested Views

View 1: By Category (Board)

- Group by: Category
- Sort by: Performance Rating (descending)

- Filter: Status = Active

View 2: Most Used (Table)

- Sort by: Times Used (descending)
- Show: Prompt Name, Category, Times Used, Performance Rating, Last Used

View 3: Needs Attention (Table)

- Filter: Performance Rating = ★ or ★★
- Filter: Times Used > 2
- Purpose: Prompts that aren't working — time to tweak or retire them

View 4: Swipe File (Gallery)

- Filter: Performance Rating = ★★★★★ or ★★★★★★
- Show: Prompt Name, Best Output
- Purpose: Quick access to your greatest hits

Page Template: Individual Prompt

For each prompt entry, use this page structure:

```
# {Prompt Name}

## The Prompt
{Full prompt text with variables}

## My Variables
- {variable_1}: My value
- {variable_2}: My value

## Best Output
{Paste the best result this prompt has generated}

## Version History
- v1 (date): Original from toolkit
- v2 (date): Changed X to Y, improved output quality
- v3 (date): Added anti-instruction about Z

## Results
- Used for: {what I created with this}
- Performance: {any measurable result – CTR, open rate, conversion, etc.}
```

Dashboard Page: Prompt Library Home

Create a main page with these linked database views:

```
# 🧠 AI Prompt Library

## Quick Stats
- Total prompts: {number}
- Active prompts: {number}
```

```
- Top performer: {name}

## 🔥 Top Performers
[Linked view: Swipe File – top 5 by rating]

## 📁 Recently Used
[Linked view: sorted by Last Used, limit 5]

## ⚠️ Needs Tweaking
[Linked view: Needs Attention]

## 🗂 Browse by Category
[Linked view: By Category board]
```

Bonus: Brand Voice Reference

Add a separate page in your Notion workspace:

```
# Our Brand Voice

## Tone
{Your tone description}

## We Sound Like
{Your brand personality}

## We Never Say
- {word/phrase 1}
- {word/phrase 2}
- {word/phrase 3}

## Sample Sentences
- Good: "{example of on-brand copy}"
- Bad: "{example of what we don't want}"

## Target Customer Quick Reference
- Who: {audience}
- Pain: {main pain point}
- Goal: {what they want to achieve}
- Budget: {range}
```

Link this page in every prompt entry so it's always one click away.

Bonus: Content Calendar Database

Create a second database to plan where prompt outputs get used:

Property	Type	Options
----------	------	---------

Content Piece	Title	—
Platform	Select	Shopify, Email, Instagram, Twitter, Facebook, Pinterest, TikTok, Google Ads, Blog
Prompt Used	Relation	→ Prompt Library database
Status	Select	Draft, Review, Scheduled, Published
Publish Date	Date	—
Performance	Text	CTR, engagement, conversion — whatever matters
Link	URL	Link to the published content

This closes the loop: prompt → content → results → prompt improvement.

Your prompt library should be a living system, not a filing cabinet. Use it, update it, make it yours.
