

Quick-Start Guide: Your First 5 Minutes

Get results before your coffee gets cold.

You just bought 50+ prompts. That's a lot. Here are the 10 that deliver the fastest ROI — start with these, then explore the rest when you're ready.

The 10 Prompts That Pay for This Toolkit

1. Fix Your Product Descriptions (Prompt 1.1)

Why first: Your product pages are where money is made or lost. Copy the Feature-to-Benefit Transformer, plug in your hero product, and you'll have a description that's better than 90% of what's on your store right now.

Time to value: 3 minutes.

2. Recover Abandoned Carts (Prompt 2.1)

Why second: You're losing 70% of carts. The 3-email abandoned cart sequence is the single highest-ROI automation you can set up. Plug it into Klaviyo or Shopify Email today.

Time to value: 20 minutes to set up the automation.

3. Write Your Meta Descriptions (Prompt 4.2)

Why third: Your top 10 product pages probably have auto-generated or missing meta descriptions. Fix them and watch your organic CTR improve within weeks.

Time to value: 15 minutes for 10 pages.

4. Instagram Caption Generator (Prompt 3.1)

Why: Staring at a blank caption box is the worst. Generate three versions, pick the best, customize, post. Done.

Time to value: 2 minutes per post.

5. Customer Complaint Response (Prompt 5.2)

Why: The next time an angry customer emails, you'll have a framework that de-escalates without groveling. Save it as a template in your helpdesk.

Time to value: 5 minutes to save as template.

6. Facebook Ad Copy (Prompt 8.1)

Why: You're probably running the same ad copy you wrote six months ago. Generate three fresh variations and A/B test them this week.

Time to value: 5 minutes.

7. Collection Page SEO Copy (Prompt 4.3)

Why: Collection pages are SEO goldmines that most stores leave completely unoptimized. Add keyword-rich copy to your top 3 collections.

Time to value: 10 minutes per collection.

8. Post-Purchase Follow-Up (Prompt 2.5)

Why: Turn one-time buyers into repeat customers. Set up this 5-email sequence and it runs forever.

Time to value: 30 minutes to set up.

9. Review Request Email (Prompt 5.4)

Why: More reviews = more trust = more sales. This email actually gets opened because it doesn't sound like every other review request.

Time to value: 5 minutes.

10. Competitor Store Teardown (Prompt 7.1)

Why: Paste your biggest competitor's URL and get a structured analysis of what they're doing better — and where you can beat them.

Time to value: 5 minutes.

How to Use Any Prompt

1. **Copy the prompt** from the toolkit
2. **Replace all {variables}** with your specific information — the more detail, the better
3. **Paste into your LLM** (ChatGPT, Claude, Gemini — any of them work)
4. **Review the output** — it'll be 80% ready. Polish the last 20% with your brand voice
5. **Iterate** — if it's close but not right, tell the AI what to fix instead of starting over

Pro Tips for Better Results

- **More context = better output.** Don't just say "my product is a camera." Say "a \$2,498 full-frame mirrorless camera for enthusiast photographers upgrading from crop sensor."
- **Paste examples of what you like.** Show the AI a product description you admire and say "write in this style."
- **Use follow-up prompts.** "Make it shorter." "Add more urgency." "Remove the cliché in paragraph 2."
- **Save your best outputs.** Build a swipe file of generated copy that worked. Feed it back to the AI next time.

Now go make money. The rest of the toolkit is there when you need it.
